PROFESSIONAL SUMMARY

Computer science graduate student with experience in cybersecurity, backend development, space object characterization, and applied research. Develop technical tools, analyze data, and communicate findings using Python, Go, APIs, and cloud services. Background includes cybersecurity testing, system hardening, technical reporting, and cadet training leadership. Seeking federal civilian opportunities supporting cybersecurity, intelligence, and national defense missions.

TECHNICAL SKILLS

Programming: Python, C, Go, JavaScript, SQL

Systems and development: Linux, Git, React, gRPC, REST APIs, PostgreSQL

Cloud and data: Amazon Web Services, Amazon S3, data collection and processing

Technical areas: Cybersecurity testing, system hardening, reverse engineering, cryptography, AI integration, technical reporting

PROFESSIONAL EXPERIENCE

Graduate Research Assistant

Northern Arizona University, College of Engineering, Informatics, and Applied Sciences

August 2026–Present | 12 hours per week

- Develop the backend infrastructure for CommUnityBuddy, a research software system designed to help open-source project maintainers lower barriers to entry for new contributors.
- Build and integrate AI-supported features using Python and APIs to help contributors understand project community structure and contribution guidelines.
- Test and debug backend components and research prototypes to support evaluation of the system's usability and effectiveness.

Cybersecurity Intern — Advanced Course in Engineering

Griffiss Institute

May 2026–August 2026 | 90 hours per week

- Applied cybersecurity tools and techniques to problems involving system hardening, operating system and hardware exploitation, reverse engineering, and cryptography.
- Developed a drone situational awareness application using React, Go, and gRPC to display drone payloads, locations, and radar ping locations. Enabled operators to label pings as enemy, friendly, or neutral, improving shared situational awareness during a simulated operation.
- Developed a Model Context Protocol (MCP) server in Go to enable large language models to execute cybersecurity tools and support automated test generation, execution, and interpretation, with the goal of accelerating testing during tool development.
- Authored 200+ pages of weekly technical reports documenting problem background, assumptions, tools and techniques, and solutions. Analyzed risks associated with incorrect assumptions to communicate limitations and potential consequences.

Arizona Space Grant Space Industry Intern

Katalyst Space Technologies

January 2026–May 2026 | 10 hours per week

- Developed a Python pipeline to retrieve and process radar cross-section measurements from the Unified Data Library through API calls, supporting research into space object classification.
- Researched challenges in classifying space objects as payloads, rocket bodies, or debris and proposed potential solutions to guide future company research and development.
- Retrieved optical cross-section measurements from Amazon S3 and compared them with radar observations to investigate relationships between the two measurement types.

Computer Science and Cybersecurity Tutor

Northern Arizona University, College of Engineering, Informatics, and Applied Sciences

August 2023–Present | 12 hours per week

- Provide individual and group tutoring in computer science and cybersecurity, adapting explanations to students' experience levels and learning needs.
- Guide students through programming, debugging, and problem-solving to strengthen their understanding of course concepts and ability to work independently.
- Explain technical concepts in accessible terms across introductory programming, data structures, and cybersecurity coursework.

EDUCATION

Master of Science in Computer Science

Northern Arizona University, Flagstaff, Arizona

Expected December 2026 | GPA not yet established

Bachelor of Science in Computer Science

Northern Arizona University, Flagstaff, Arizona

Conferred May 8, 2026 | GPA: 3.95/4.00

LEADERSHIP EXPERIENCE

i5 Space Squadron Commander

Clyde Tombaugh Squadron, Northern Arizona University

May 2025–May 2026 | 5 hours per week

- Directed a six-member team in coordinating squadron activities and promoting engagement with the U.S. Space Force mission.
- Led the squadron's first training class for four new members, expanding participation in space-focused education and developing members' understanding of the Space Force mission.

Air Force Reserve Officer Training Corps Cadet

Air Force Reserve Officer Training Corps (AFROTC), Northern Arizona University

August 2021–December 2025 | 10 hours per week

- Selected for commissioning into the U.S. Space Force.
- Served as Squadron Training Officer, August–December 2025, training 22 cadets under national AFROTC requirements to prepare them for Field Training and the Professional Officer Course.

SELECTED RECOGNITION

- Outstanding Senior in Computer Science, Steve Sanghi Department of Engineering, Northern Arizona University — May 9, 2026
- Air Force Institute of Technology (AFIT) Immersive Cyber Education Program — Certificate of Completion, August 9, 2024
